Project Title

“Design, Manage, and Publish a Website Using GitHub Pages & GitHub Projects”

Project Overview

In this assignment, each group will design a multi-page website using **HTML**, **CSS**, and basic **JavaScript**. The project will be managed using a GitHub **Project Board** and published online using **GitHub Pages**.

This project introduces practical, industry-relevant skills including:

- Website creation
- Version control with GitHub
- Collaboration workflows
- Project planning using GitHub Projects
- Publishing a live website online

Group Structure

Each group will consist of **3 members**. All members **MUST**:

- Contribute work
- Commit to the repository
- Appear in the Project Board as assignees
- Have names listed in project documentation

Project Requirements

A. Website Requirements (10 Marks)

Each group will create a **website** with the following *minimum* pages:

1. Home Page (Mandatory)

Must include:

- Introduction paragraph
- Group member names
- Navigation menu to other pages
- At least one image

2. Table Page (Mandatory)

Create properly structured HTML tables showing any data, e.g., timetable, price list, results, etc. relevant to your project.

3. Form Page (Mandatory)

Form containing fields like:

- Name field
- Email field
- Dropdown or radio option
- Submit button
- Any other if you want according to your project needs

No backend needed.

4. Additional Page (corresponding to your project context)

- About Us
- Services
- Gallery
- Contact Info
- Anything related to the group's theme

5. Styling Requirements

- Basic CSS allowed (inline or external)
- You can use a framework in only one of the pages and it should not be a home page.
- Keep the design simple and clean

B. GitHub Repository Requirements (5 Marks)

All work must be stored in a single shared **GitHub repository**.

The repo must include:

- Proper folder structure (e.g. images/, css/, pages/)
- README.md containing:
 - Group member names
 - Project description
 - Live site URL
- Commit history of every group member, no commits will result in zero marks.
- Correct filenames (index.html as main home page)

Screenshots required:

- Repository homepage
- Commits page
- Folder structure

C. Deployment with GitHub Pages (3 Marks)

The website must be deployed using **GitHub Pages**

Submit:

- Live website link
- Screenshot of GitHub Pages settings

D. GitHub Project Board (2 Marks)

Each group must create a **Project Board**.

Minimum Requirements:

- Columns: **To Do, In Progress, Done**
- At least **6 task cards**, e.g.,
 - Create homepage
 - Build table page
 - Design form page
 - Add navbar
 - Upload files
 - Deploy to GitHub Pages
- Cards must be moved to **Done** by completion
- All cards must have **assignees**
- Screenshots required

Themes (Choose One)

Groups may choose any theme, such as:

- University society website
- Bakery or restaurant website
- Online resume website
- Travel & tourism site
- Local business website
- School portal (simple)
- Book store page
- Animal rescue site
- *Any other if you like*

Two groups can't have the same project. Whoever adds the project title in the excel sheet ([Semester Project Selection](#)) first will be assigned to that project.

Theme must be consistent across all pages.

Project Submission Requirements

Each group must submit the following in one zipped folder or LMS upload:

a) PDF Report

Report must include:

- Cover page (Project title + names + section)
- Table of contents
- Introduction

- Website structure (pages outline)
- Screenshots:
 - Website pages
 - GitHub repository
 - Commits page
 - Folder structure
 - GitHub Pages settings
 - GitHub Project Board
- GitHub repo link
- Live website link
- Conclusion
- Bibliography

b) Source Code

Evaluation Rubric (20 Marks Total)

Component	Marks	Description
Website Pages	10	Structure, navigation, formatting, table + form correctness
GitHub Repository	5	Commits, README, folder structure, collaboration
GitHub Pages Deployment	3	Working live link + correct deployment
GitHub Project Board	2	Tasks, columns, progress, screenshots
Total	20	

Academic Integrity

- All work must be original.
- Cross-group copying will result in zero marks.
- AI tools may be used **only for learning**, not full code generation.
- All members must participate equally.

You are allowed to add more to the project if you like, you just need to have an understanding about what you have included and done in the project.
